-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 2 April 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-71 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-71 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 02 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

Art Unit: 2109

### DETAILED ACTION

This is a response to the following case application:

Non-provisional Application: 10/816687 filed on April 2, 2004.

This application has foreign priority claims based on the following foreign application:

Germany 10 2004 004799.5 filed on January 30, 2004.

#### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

1. Claim 70 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 70 is software per se, which is not a statutory category of invention because it lacks the structure necessary to make the claim a machine.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 1-35, 39-62, 66-69, and 71 are rejected under 35 U.S.C. 102(b) as being anticipated by Beach [US 2001/0055283 A1].

a. Based on independent claim 1, Beach teaches a method of performing encrypted WLAN (Wireless Local Area Network) communication [Pg 4, Par 0060], comprising the steps of: performing a connection set-up for said encrypted WLAN communication [Pg 4, Par 0054-0058]; and performing data frame encapsulation and/or decapsulation during said encrypted WLAN communication [Pg 4, Par 0060-0062]; wherein said connection set-up is performed by executing software-implemented instructions [Pg 4, Par 0043]; and wherein said data frame encapsulation and/or decapsulation is performed by operating single-purpose hardware [Pg 4, Par 0059] [Pg 3-4, Par 0037].

b. With regard to dependent claim 2, Beach teaches the method of claim 1, wherein the step of performing said connection set-up comprises authenticating a WLAN station by another WLAN station and/or a WLAN authentication server [Pg 10, Par 0138] [WLAN station authentication is inherent as cited for the provision of multiple ESS LANs with three levels of wireless network security].

c. With regard to dependent claim 3, Beach teaches the method of claim 1, wherein the step of performing said connection set-up comprises associating a WLAN station with another WLAN station and/or a WLAN access point as WLAN communication counter-parts [Pg 4, Par 0054].

d. With regard to dependent claim 4, Beach teaches the method of claim 1, wherein the step of performing said connection set-up comprises exchanging

cryptographic keys between a WLAN station and another WLAN station and/or a WLAN access point [Pg 6, Par 0094].

e. With regard to dependent claim 5, Beach teaches the method of claim 1, wherein performing said encrypted WLAN communication further comprises obtaining a plurality of data frames intended for said data frame encapsulation from driver software [Pg 7, Par 0111] [Pg 8, Par 0121] [Pg 9, Par 0131].

f. With regard to dependent claim 6, Beach teaches the method of claim 5, wherein the step of obtaining the plurality of data frames comprises obtaining a plurality of data frames comprising cipher information indicating a determining factor for performing the data frame encapsulation and/or decapsulation [Pg 9, Par 0131-0134].

g. With regard to dependent claim 7, Beach teaches the method of claim 6, wherein said determining factor comprises a way in which a data frame intended for the data frame encapsulation is fragmented [Pg 9, Par 0133].

h. With regard to dependent claim 8, Beach teaches the method of claim 6, wherein said determining factor comprises a cipher protocol suitable for performing the data frame encapsulation [Pg 8, Par 0122] [WEP is the cipher protocol as cited.].

i. With regard to dependent claim 9, Beach teaches the method of claim 6, wherein said determining factor comprises a cryptographic key suitable for encrypting a data frame [Pg 6, Par 0094].

j. With regard to dependent claim 10, Beach teaches the method of claim 5, wherein performing said encrypted WLAN communication further comprises selecting one of the plurality of data frames for said data frame encapsulation by performing a prioritization algorithm implemented on the single-purpose hardware [Pg 10, Par 0139].

k. With regard to dependent claim 11, Beach teaches the method of claim 5, wherein the step of performing said data frame encapsulation comprises inserting a package number and/or sequence number into one of the plurality of data frames [Pg 9, Par 0131-0134] [This is inherent in the frame control field using the IEEE 802.11 standard (Brenner, 1997, Pg 19).].

l. With regard to dependent claim 12, Beach teaches the method of claim 5, wherein the step of performing said data frame encapsulation comprises encrypting at least part of one of the plurality of data frames [Pg 8, Par 0122].

m. With regard to dependent claim 13, Beach teaches the method of claim 5, wherein the step of performing said data frame encapsulation comprises calculating an integrity value appropriate for verifying integrity of one of the plurality of data frames once said data frame decapsulation is completed [Pg 9, Par 0132].

n. With regard to dependent claim 14, Beach teaches the method of claim 13, wherein the step of performing said data frame encapsulation comprises encrypting said integrity value [Pg 6, Par 0095].

- o. With regard to dependent claim 15, Beach teaches the method of claim 14, wherein the step of performing said data frame encapsulation comprises inserting the encrypted integrity value into one of the plurality of data frames [Pg 9, Par 0132].
- p. With regard to dependent claim 16, Beach teaches the method of claim 1, wherein performing said encrypted WLAN communication further comprises receiving a data frame intended for said data frame decapsulation from a WLAN station and/or WLAN access point [Pg 3, Par 0036].
- q. With regard to dependent claim 17, Beach teaches the method of claim 1, wherein the step of performing said data frame decapsulation comprises obtaining cipher information indicating a determining factor for performing the data frame encapsulation and/or decapsulation from a storage unit within the single-purpose hardware [Pg 5, Par 0071].
- r. With regard to dependent claim 18, Beach teaches the method of claim 17, wherein said determining factor comprises a cipher protocol suitable for performing the data frame decapsulation [Pg 8, Par 0122] [WEP is the cipher protocol as cited.].
- s. With regard to dependent claim 19, Beach teaches the method of claim 17, wherein said determining factor comprises a cryptographic key suitable for decrypting a data frame [Pg 6, Par 0094].

t. With regard to dependent claim 20, Beach teaches the method of claim 16, wherein the step of performing said data frame decapsulation comprises decrypting at least part of the data frame [Pg 8, Par 0122].

u. With regard to dependent claim 21, Beach teaches the method of claim 20, wherein the data frame comprises an encrypted integrity value appropriate for verifying integrity of the data frame once said data frame decapsulation is completed, and the step of decrypting at least part of the data frame comprises decrypting the encrypted integrity value [Pg 6, Par 0095].

v. With regard to dependent claim 22, Beach teaches the method of claim 21, wherein the step of performing said data frame decapsulation further comprises calculating the integrity value from at least part of the data frame except the encrypted integrity value [Pg 6, Par 0095].

w. With regard to dependent claim 23, Beach teaches the method of claim 22, wherein the step of performing said data frame decapsulation further comprises calculating an integrity verification value indicating a difference between the decrypted integrity value and the calculated integrity value [Pg 6, Par 0095] [Calculating an integrity verification value indicating a difference between the decrypted integrity value and the calculated integrity value is an inherent process implementing CRC functions for verifying data integrity of data frames.].

x. With regard to dependent claim 24, Beach teaches the method of claim 23, wherein the step of performing said data frame decapsulation further

comprises inserting said integrity verification value into the data frame [Pg 6, Par 0095] [Pg 9, Par 0132] [Inserting said integrity verification value into the data frame is an inherent step in the data frame decapsulation process using the IEEE 802.11 standard data frame format.]

y. With regard to dependent claim 25, Beach teaches the method of claim 24, wherein performing said encrypted WLAN communication further comprises performing counter-measures according to said integrity verification value by executing software-implemented instructions, wherein said counter-measures are suitable for limiting the amount of information available to an illegitimate WLAN protruder [Pg 10, Par 0138-0139] [Performing said counter-measures is inherent for the application of multiple ESS LANs with multiple levels of security of wireless networks as cited.].

z. With regard to dependent claim 26, Beach teaches the method of claim 1, wherein the step of performing said data frame encapsulation and/or decapsulation comprises generating cryptographic data suitable for encrypting or decrypting a data frame [Pg 6, Par 0094].

aa. With regard to dependent claim 27, Beach teaches the method of claim 26, wherein the step of generating cryptographic data comprises generating authentication data suitable for encrypting a data frame in a manner specific to a WLAN station or decrypting a data frame encrypted in a manner specific to a WLAN station [Pg 6, Par 0094] [Pg 10, Par 0138-0139] [Generating said authentication data specific to a WLAN station is inherent for the application of

providing multiple ESS LANs with multiple levels of security of wireless networks whereby the cell controller can perform the function of determining which ESS network a mobile unit is communicating with an RF port associated with the cell controller is operating on and verifying the multiple levels of security provided in connection with the access by the mobile unit devices as cited.].

bb. With regard to dependent claim 28, Beach teaches the method of claim 1, wherein said encrypted WLAN communication is performed based on the IEEE 802.11i security standard [Pg 3, Par 0036] [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture.].

cc. With regard to dependent claim 29, Beach teaches the method of claim 1, wherein said encrypted WLAN communication is performed in a WLAN based on the IEEE 802.11b standard [Pg 3, Par 0036] [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11b to allow higher data rate transmissions while keeping the same hardware/system design architecture.].

dd. With regard to dependent claim 30, Beach teaches the method of claim 1, wherein said software-implemented instructions are executed on general-purpose hardware by driver software [Pg 5, Par 0065].

ee. With regard to dependent claim 31, Beach teaches the method of claim 1, wherein said single-purpose hardware is operated periodically [Pg 7, Par 0101].

ff. With regard to dependent claim 32, Beach teaches the method of claim 31, wherein said single-purpose hardware is operated periodically at 11 MHz [Pg 7, Par 0100-0101].

gg. With regard to dependent claim 33, Beach teaches the method of claim 31, wherein said data frame encapsulation and/or decapsulation is performed according to the TKIP (Temporal Key Integrity Protocol) protocol [Pg 3, Par 0036] [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i having the TKIP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture.].

hh. With regard to dependent claim 34, Beach teaches the method of claim 33, wherein the step of performing said data frame encapsulation and/or decapsulation comprises performing RC4 (Rivest's Cipher 4) encryption and/or decryption [Pg 6, Par 0094].

ii. With regard to dependent claim 35, Beach teaches the method of claim 34, wherein said RC4 encryption and/or decryption is performed by operating at least part of the single-purpose hardware [Pg 6, Par 0094-0095].

jj. With regard to dependent claim 39, Beach teaches the method of claim 34, wherein the step of performing said RC4 encryption and/or decryption comprises encrypting or decrypting at least part of a data frame comprising bytes, and said RC4 encryption and/or decryption is split over at least two operating periods of the single-purpose hardware to encrypt or decrypt one byte

of the data frame [Pg 6-7, Par 0094-0095] [Beach explains the per byte computation burden for the CRC/WEP tasks, and as cited, an alternative solution to timing issues due to CPU limitations would be to catch up first for the packet CRC calculation and then catch up with WEP/CRC tasks which is essentially splitting over the operations for at least two operating periods of the CPU.]

kk. With regard to dependent claim 40, Beach teaches the method of claim 31, wherein said data frame encapsulation and/or decapsulation is performed according to the CCMP (Counter-mode Cipher block chaining Message authentication code Protocol) protocol [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i having the CCMP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture.].

ll. With regard to dependent claim 41, Beach teaches the method of claim 40, wherein the step of performing said data frame encapsulation and/or decapsulation comprises performing CCMP-AES (Advanced Encryption Standard) encryption and/or decryption [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i having the CCMP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture. The CCMP-AES is inherent to using the CCMP protocol.].

mm. With regard to dependent claim 42, Beach teaches the method of claim 41, wherein the step of performing said CCMP-AES encryption and/or decryption

comprises encrypting or decrypting at least part of a data frame comprising bytes, and said CCMP-AES encryption and/or decryption is performed by repeatedly performing a sequence of encryption or decryption steps on said part of the data frame [Pg 6-7, Par 0094-0095] [Beach explains the per byte computation burden for the CRC/WEP tasks in terms of instruction per byte processing of data. Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i having the CCMP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture. The CCMP-AES is inherent to using the CCMP protocol. Thus when updated to the newer 802.11i, it will be inherent that the encryption and/or decryption are performed by repeatedly performing a sequence of encryption or decryption steps on said part of the data frame.].

nn. With regard to dependent claim 43, Beach teaches the method of claim 42, wherein the step of performing the sequence of encryption or decryption steps comprises performing byte substitution using a plurality of cryptographic substitution boxes [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i having the CCMP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture. The CCMP-AES is inherent to using the CCMP protocol. The step performing byte substitution

using a plurality of cryptographic substitution boxes is inherent to the AES encryption process as disclosed in the Specification on Page 4, Ln 24-33.].

oo. With regard to dependent claim 44, Beach teaches the method of claim 43, wherein the step of performing byte substitution on said part of the data frame comprises sequentially performing the byte substitution on a plurality of sub-parts of said part of the data frame [Beach uses the IEEE 802.11 Standard whose software/firmware can be updated to the newer 802.11i having the CCMP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture. The CCMP-AES is inherent to using the CCMP protocol. The step sequentially performing byte substitution on a plurality of sub-parts of said part of the data frame is inherent to the AES encryption process as disclosed in the Specification on Page 4, Ln 24 – Page 5, Ln 15.].

pp. With regard to dependent claim 45, Beach teaches the method of claim 42, wherein the step of performing the sequence of encryption or decryption steps is split over at least two operating periods of the single-purpose hardware [Pg 6-7, Par 0094-0095] [Beach explains the per byte computation burden for the CRC/WEP tasks, and as cited, an alternative solution to timing issues due to CPU limitations would be to catch up first for the packet CRC calculation and then catch up with WEP/CRC tasks which is essentially splitting over the operations for at least two operating periods of the CPU. The WEP/CRC tasks are inherent to the IEEE 802.11 Standard that Beach uses whose

software/firmware can be updated to the newer 802.11i having the CCMP protocol to address existing security gaps of the native WEP security protocol while keeping the same hardware/system design architecture. Thus with the new 802.11i, the step of performing the sequence of encryption or decryption steps splitting over at least two operating periods of the single-purpose hardware is still inherent.].

qq. Independent claims 46, 69, 70, and 71 are simply the entities for performing the method of claim 1. Claim 46 is a single-purpose hardware device; 69 is an integrated circuit chip; 70 is the computer program/software; 71 is a computer system all performing the same method of claim 1. Claims 46, 69, 70, and 71 are rejected using the same references as claim 1.

rr. With regard to dependent claim 47, Beach teaches the single-purpose hardware device of claim 46, wherein said internal hardware components further comprise an internal memory for storing data frames intended for or resulting from the data frame encapsulation or decapsulation [Pg 9, Par 0131-0134] [Pg 5, Par 0071] [Pg 5, Par 0074-0075].

ss. With regard to dependent claim 48, Beach teaches the single-purpose hardware device of claim 47, wherein said internal memory comprises an arbitration unit for performing memory access control [Pg 5, Par 0079].

tt. With regard to dependent claim 49, Beach teaches the single-purpose hardware device of claim 47, wherein said internal memory comprises a hash memory for storing cipher information indicating a determining factor for

performing the data frame encapsulation and/or decapsulation [Pg 5, Par 0071]

[Pg 5, Par 0074-0075] [Pg 9, Par 0131-0134].

uu. With regard to dependent claim 50, Beach teaches the single-purpose hardware device of claim 49, wherein said determining factor comprises a cipher protocol suitable for performing the data frame encapsulation and/or decapsulation [Pg 8, Par 0122] [WEP is the cipher protocol as cited.].

vv. With regard to dependent claim 51, Beach teaches the single-purpose hardware device of claim 49, wherein said determining factor comprises a cryptographic key suitable for encrypting or decrypting a data frame [Pg 6, Par 0094].

ww. With regard to dependent claim 52, Beach teaches the single-purpose hardware device of claim 47, wherein said internal hardware components further comprise a radio transceiver for receiving data frames from and/or transmitting data frames to a WLAN station and/or WLAN access point [Pg 5, Par 0071].

xx. With regard to dependent claim 53, Beach teaches the single-purpose hardware device claim 52, wherein said internal single-purpose hardware components comprise a cryptographic component for performing the data frame encapsulation and/or decapsulation and a MAC (Medium Access Control) component for communicating with the radio transceiver [Pg 5, Par 0072] [Pg 6, Par 0093].

yy. With regard to dependent claim 54-57, it is inherent that Beach teaches: the cryptographic component and internal memory are arranged to communicate

with each other; cryptographic component and MAC component are arranged to communicate with each other; MAC component and internal memory are arranged to communicate with each other; and internal memory is arranged to communicate over the interface with external hardware components.

zz. With regard to dependent claim 58, Beach teaches the single-purpose hardware device of claim 53, wherein said MAC component further is for performing a prioritization algorithm for selecting a data frame for said data frame encapsulation from a plurality of data frames [Pg 10, Par 0139].

aaa. Dependent claims 59-61 are rejected using the same references as claims 11, 26, and 27 respectively. Claims 59-61 is the apparatus for performing the method claims of 11, 26, and 27 respectively.

bbb. Dependent claim 62 is rejected using the same references as claims 33-35. Claim 62 is the apparatus for performing the methods of claims 33-35 combined.

ccc. Dependent claim 65 is rejected using the same references as claims 31 and 39. Claim 65 is the apparatus for performing the methods of claims 31 and 39 combined.

ddd. Dependent claim 66 is rejected using the same references as claims 40-43. Claim 66 is the apparatus for performing the methods of claims 40-43 combined.

eee. Dependent claim 67 is rejected using the same references as claim 44. Claim 67 is the apparatus for performing the method of claim 44.

Art Unit: 2109

fff. Dependent claim 68 is rejected using the same references as claims 31 and 45. Claim 68 is the apparatus for performing the methods of claims 31 and 45 combined.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

1. Claims 36-38, and 63-65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beach [US 2001/0055283 A1] and further in view of Campbell [Non-Patent Literature, November 2000].

- a. With regard to dependent claim 36, it is inherent that the single-purpose hardware will have a form of data structure for the storage and management of

Art Unit: 2109

data involved in task/process execution. Beach teaches the method of claim 35, but does not explicitly disclose wherein said part of the single-purpose hardware has a tree structure [Tree structure is interpreted as a form of data structure.] Prior Art disclosed in the specification utilizes an ordered array (Figure 2C). Campbell teaches a tree data structure that combines the advantages of searching performance of an ordered arrays, and the efficiency of insertion and deletion of data in a linked list data type structure. Beach and Campbell are analogous art because they both solve the same problem of how to store and manage data in a digital device.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the tree data structure of Campbell [a classic data structure well known in the art] for the storage and management of data involved in task/process execution because the tree data structure can be implemented as opposed to the simpler ordered matrix/array type data structure that is normally used. The suggestion/motivation for combining would have been to utilize the combined advantages of an ordered array and the efficiency of a linked list type data structure; thereby increasing efficiency and data throughput by minimizing accesses when searching/retrieving data for various functions of the digital device. Therefore, it would have been obvious to combine Beach with Campbell to obtain the invention as specified in claim 36.

b. Claim 37 is rejected because it is the same method as claim 36, and wherein said RC4 encryption and/or decryption will inherently be performed by

Art Unit: 2109

operating only a sub-part of the single-purpose hardware corresponding to the tree root, part of the tree leaves and the tree components interconnecting the tree root with said part of the tree leaves.

c. Claim 38 is rejected because it is the same method of claim 37, and wherein said sub-part of the single-purpose hardware will inherently correspond to the tree root, two of the tree leaves and the tree components interconnecting the tree root with said two of the tree leaves.

d. Dependent claim 63 is rejected using the same references and rationale as claims 36-37. Claim 63 is the apparatus for performing the methods of claims 36-37 combined.

e. Dependent claim 64 is rejected using the same reference and rationale as claim 38. Claim 64 is the apparatus for performing the method of claim 38.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Martin Jeriko P. San Juan whose telephone number is 571-272-7875. The examiner can normally be reached on M-F 7:30a - 5:00p EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Del Sole can be reached on 571-272-1130. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2109

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
